

Creating a safe and secure environment for you and your people

OAM (ME) Ltd. Emerging Service Lines 2016

Long Range Precision Shooting (Sniping)

One of the key members of any military organization is that rare, trained person who can shoot a telescopic equipped rifle with a high degree of accuracy.

Such a valued shooter removes threats on the battlefield, neutralizes threat to law enforcement personnel from a distance, protects VIPs and saves the lives of hostages.

No one is a natural at long range precision shooting.

It requires specialized training, proper equipment and a tremendous amount of patience.

The long range precision shooter often is required to lay silent and still for extended periods of time in highly adverse weather conditions to get that one shot necessary to bring a tense situation to a proper conclusion.

Creating a safe and secure environment for you and your people

OAM (ME) Ltd. Emerging Service Lines 2016

Long Range Precision Shooting (Sniping)

Some of the subjects taught in the OAMME course include:

- Ballistics and physics of shooting.
- Range and distance estimation.
- Concealment and specialized movement techniques.
- Weather considerations in long range shooting.
- Weapons and ammunition comparison.

Not everyone is cut out to be a sniper.

OAMME's experts will help you select the proper candidates from among your personnel or, in the alternative, assist in selecting new recruits for this specialized skill.
